

Together, we can shape the future for infusion centers

Through our portfolio of integrated specialty solutions, we support your infusion practice's workflow – whether it's enhancing the financial health of your practice through solutions and expertise or optimizing patient outcomes through clinical insight management, care management solutions, and education services, we can help you every step of the way.

Our synthesized data, reporting, and actionable analytics help enable your clinical and business decision-making allowing you to spend your time where it matters most – focusing on patient-centric care.

cencora

Pharmacy services for medically integrated dispensing

Adding a pharmacy to your practice opens the door for new revenue streams for your infusion practice. Whether through a licensed pharmacy or physician dispensing program, our **Specialty Practice Rx Services** can help you generate additional income through setting up an in-practice pharmacy allowing convenient access to medications for your patients.

Our pharmacy program is the longest running medically integrated dispensing program in the specialty physician space. We can leverage that expertise to stand up a new pharmacy, optimize your current pharmacy operations, or assist with the accreditation process.

SmartRx Analyzer provides specific insights into the performance of your medically integrated dispensing program. This pharmacy analytics tool enables you to quickly detect patterns and initiate action that can help you manage the operational flow of dispensing, adapt to dispensing trends, and enhance patient care.

Your practice can increase patient satisfaction while capturing additional revenue by filling patient prescriptions in your office with **SmartRx Fill**. Your patients will appreciate the convenience of having their prescriptions when they leave your office.

Claims reconciliation is a necessary business tool among successful dispensaries. By matching paid claims to third-party reimbursements using **SmartRx Reconciliation**, you can identify paid, underpaid, and unpaid claims. If you are not reconciling your claims, you are likely losing or missing money that is owed to your dispensary.

SmartRx Credentialing is a PBM contracting service for medically integrated dispensing programs regardless of which dispensing software you use. With SmartRx Credentialing, we take the burden off of your staff and assist with the entire credentialing process including helping with maintenance and updates for your contracts with the PBMs and your PSOA.

As a dispensing practice, you will have access to Cencora's **PSAOs - Elevate** and **Accelerate**, providing the support you need to focus on delivering high-quality patient care while benefiting from cost savings through better payer contracts, streamlined operations, audit assistance, improved financial management capabilities, and specialty pharmacy accreditation support.

Practice analytics

Empower your practice with actionable insights through our robust business intelligence solution – **InfoDive®**. Derived from data across various data sources in your practice—ranging from financial management to claims information to inventory management – you will have the insights you need to make data-driven decisions for improved practice performance.

Our comprehensive reports allow you to analyze your buy-and-bill processes, benchmarking reports, referral network, and more to help enhance the financial health of your practice.

Practice Health Insights is a comprehensive web-based application that combines practice data from pharmacy, clinical, and financial solutions into a single platform that provides key insights into practice performance. The customizable dashboard offers key performance indicators (KPIs) and metrics specific to each area, transforming how you assess your practice.

Infusion management

Help improve patient safety and increase practice efficiencies with **IntelliDoseTxM®**, an infusion management solution that integrates directly with your electronic health record (EHR) supporting your clinical, billing, and administration processes with automated workflows.

By integrating IntelliDoseTxM into your infusion workflow, your practice can achieve optimal efficiency and have accurate data needed to manage your patients' infusion treatments.

Inventory management

Nucleus® is the premier inventory management solution designed to optimize your practice at every level. From effectively reducing on-hand inventory and associated carrying costs to tracking and managing patient dispenses, Nucleus helps your practice to work as efficiently and effectively as possible, improving patient care in the process.

You can order, dispense, and track product or run more than 50 customizable reports to identify cost savings, reveal unused product, inventory not accounted for, and more.

MIPS consulting

Optimize your MIPS incentive payments with specialized consulting services to help you navigate the increasingly complex reporting requirements of MIPS. Our team of experts can help prioritize quality, outcomes, and efficiency to help you successfully meet MIPS measures and manage the data submission process for your eligible clinicians.

Our team of MIPS experts have a proven record of client success with 99.9 percent of eligible clinicians avoiding penalties or receiving an upward adjustment using our services.
